

The Future of Well-being
6th OECD World Forum
on Statistics, Knowledge and Policy
27–29 Nov. 2018, Incheon, Korea

Preliminary programme

Version: 27 November 2018

For well over a decade, the OECD World Forums on Statistics, Knowledge and Policy have been pushing forward the boundaries of well-being measurement and policy. By bringing together thousands of leaders, experts and practitioners from all sectors of society, the Forums have contributed to an ongoing paradigm shift that emphasises people’s well-being and inclusive growth as the ultimate focus for policies and collective action. The years since the first OECD World Forum in 2004 have seen huge advances in our ability to measure the aspects of people’s lives that matter for inclusive and sustainable well-being, and to strengthen the link between statistics, knowledge and policy for better lives. However, while we now have a much more sophisticated grasp of what metrics and actions are needed to foster well-being today, we know much less about how the drivers of well-being will be transformed in the coming years. The aim of this 6th OECD World Forum, is to look ahead to the **Future of Well-being**, and to ask what are the trends that will re-shape people’s lives in the decades to come?

The future of well-being in a complex, interconnected world

The world we live in today is more connected, and yet more fragmented than ever. Online networks flourish, but as well as bringing people together they also engender political polarisation, “fake news” and distrust between groups. Rising inequalities have become a fact of life, with the gaps between the “haves” and the “have nots” growing ever wider, and spanning multiple dimensions of well-being. And many of the most pressing well-being challenges facing governments around the world – including climate change, mass migration, and the pursuit of the Sustainable Development Goals – demand increased international cooperation at a time when nationalist and separatist ideologies are gaining traction in many countries.

Looking to the future, it is likely that these issues of complexity and interconnectedness will continue to define society in increasingly unpredictable ways. Ensuring inclusive growth and well-being in this new landscape will require policy makers and actors from across society to think and act creatively, anticipating new risks and opportunities, and opening up to new approaches and new forms of partnership and collaboration across sectors.

Focus on digitalisation, governance and business

The 6th OECD World Forum will take a broad perspective to addressing the future of well-being, but will put a particular emphasis on three important trends - the digital transformation, the changing role of governance, and the emergence of the private sector as an important actor for ensuring sustainable and inclusive well-being - as well as looking at the interplay of these three factors. As always, the Forum will showcase innovations and experiences from pioneers in well-being measurement and policy from around the world, but will explore the issues from a much more forward-looking perspective. By taking a wide-ranging approach to consider how life will be in tomorrow’s world, it will aim to map a plan of action for people, government and businesses today.

Appropriately for this future-themed event, the 6th OECD World Forum will take place in one of the world’s first futuristic “smart cities” located in Incheon, Korea. The Forum is being co-organised with Statistics Korea which has long been a champion of well-being measurement (and who co-organised the immensely successful 3rd World Forum held in Busan in 2009). The organisers are also thankful for the support provided by Incheon Metropolitan City in the preparation of this Forum.

Guide to Forum Themes

Exploring and measuring future well-being

Navigating the most pressing well-being challenges facing governments and citizens in the future will require new ways of measuring, thinking and acting. More than ever, many of these challenges will need coordinated approaches and collective action, both within and between countries. However, as the world gets more connected, it is also getting more fragmented and polarised. These sessions will explore a range of new and cross-cutting issues towards gaining a common vision of important emerging issues for future well-being. In addition, three specific themes will look in more detail at three key trends impacting future lives.

Digitalisation and well-being	Governance in a complex world	Business and well-being
<p>Technologies, smart applications and other innovations in the digital economy will improve people's life experiences and help address statistical and policy challenges in a wide range of areas including health, public governance, tax, transport, education, and the environment. However, digital technologies will also be disruptive, with far-reaching effects on inequalities, employment and well-being. These sessions will discuss the opportunities and challenges presented by the "digital transformation".</p>	<p>These sessions will address the new modes of governance that are needed to ensure inclusive growth and sustainable well-being in the coming years. They will address issues such as the need for an 'empowering state' that invests in fostering equality and improving people's lives, how governments can and should work together with non-state actors from the private sector and civil society, how to ensure international cooperation into the future, how to make the connection between local action and global realities, and how to rebuild trust amongst citizens.</p>	<p>Achieving sustainable and inclusive well-being in the coming years will mean leveraging the important role of non-state actors, and particularly the private sector, in shaping good outcomes for individuals, communities and societies. These sessions will discuss how a well-being and inclusive growth approach can be fully integrated into business models and measurement frameworks, giving voice to business leaders who are setting a new course to foster more sustainable and people-minded strategies.</p>

DAY 1: Tuesday 27 November 2018

9:30 – 9:50	<p>1.a. Inaugural Session Welcome Remarks: Kang Shin-wook, Commissioner, Statistics Korea Welcome Remarks: Kim Dong-yeon, Chair of Preparatory Committee for 6th OECD WF, Deputy Prime Minister and Minister of Economy and Finance Keynote Address: Angel Gurría, Secretary-General, OECD</p>
9:50 – 10:00	<p>1.b. Congratulatory Message Moon Jae-in, President, Republic of Korea</p>
10:00 – 10:30	<p>1.c. Keynote Address: “Preparing a more responsible world for future generations” Her Royal Highness Princess Petra Laurentien of the Netherlands</p>
10:30 – 11:00	<p>Networking Break</p>
11:00 – 12:30	<p>1.d. Roundtable: “How will life be in tomorrow’s world?” Moderator: David Pilling, Author and Africa Editor of the Financial Times Speakers: Monika Queisser, Head, Division of Social Policy, OECD Olivia Bina, Principle Researcher, Institute of Social Sciences, University of Lisbon Christine Peterson, Co-founder and Past President, Foresight Institute Enrique Rueda-Sabater, Senior Advisor, Boston Consulting Group Park Young-sook, Representative, The Millennium Project Korea</p>
